OBJECTIVE

A position focusing on Python development in a Linux environment with special interest in web applications.

EDUCATION

Bachelor of Science, Computer Science
University of Massachusetts, Amherst, MA
Graduated With Honors

COMPUTER SKILLS

Languages: C#, Python, C, Haskell, Rust, Vimscript
Frameworks & Libraries: ASP.NET MVC, Windows Forms, LINQ, Django
Software & Tools: Vim, git, svn, MSSQL, Visual Studio
Operating Systems: Linux, Windows

EXPERIENCE

Lead Software Engineer Winter 2012-Present
Bridgeport National Bindery, ERP and B2B application development, Agawam, MA

- Acted as a primary motivator in the addition of Bridgeport National Bindery's biggest POD partner; implemented the bridge between the two domains and ensured all development-related tasks were finished quickly and consistently.
- Unified and homogenized several applications, including the customer portal. This eased usage for all users, as well as gave customers an automated and self-service mechanism to enter new orders and titles.

Software Engineer Fall 2006-2012
Bridgeport National Bindery, ERP and B2B application development, Agawam, MA

- Architected a revamp of the existing ERP system which drastically increased modularity, improved consistency, and streamlined the addition of large customers.
- Automated the majority of internal systems, allowing massive growth in the new field of print-on-demand.

Software Intern Summer 2006
Atalasoft, Easthampton, MA

- Worked together with a team of interns exploring the potential usage paradigms of a newly released product.
- Processed a plethora of information on both digital image theory and the dotImage product from current employees in order to find the best possible ways to pair dotImage with Windows Workflow Foundation.

PLC & HMI Programmer Winters 2002-07
Industrial Power Services, Ware, MA

- Automated alerts, logging, and proportional-integral-derivative loops used in programmable logic controllers to optimize the operating efficiency of multiple power plants.
- Implemented the ladder logic of DirectSoft PLC programs that governed the transitions and states of multiple generators and gas-burning flares, making the process of bringing up or shutting down all systems easier and faster.
